

# Bokka Bhargava Sai

+91-8919462176 | bsai52662@gmail.com

## PROFESSIONAL SUMMARY

---

Enthusiastic and diligent engineering graduate with a passion for DevOps and cloud technologies. Eager to contribute and learn in a dynamic work environment as a DevOps Engineer. Possessing a strong foundation in Linux, Git, Maven, Docker, Docker Compose, Jenkins, Ansible, Terraform, AWS EC2, and monitoring tools like Prometheus and Grafana. Additionally, adept at Python programming with hands-on experience gained through academic DevOps projects.

## EDUCATION

---

**Bachelor of Technology in Computer Science Engineering**

2025

*Godavari Institute of Engineering & Technology*

CGPA: 7.4/10

## TECHNICAL SKILLS

---

**Operating Systems:** Linux, Windows

**Programming Languages:** Python

**Version Control:** Git

**Build Tools:** Maven

**Continuous Integration/Continuous Deployment (CI/CD):** Jenkins

**Containerization:** Docker

**Application Deployment:** AWS EC2

**Configuration Management:** Ansible

**Infrastructure as Code (IaC):** Terraform, AWS CloudFormation

**Monitoring & Alerting:** Grafana

**Cloud Platforms:** Amazon Web Services (AWS)

## PROJECTS

---

**Automated Student Database Management System with CI/CD** | *Python, Docker, Jenkins, AWS EC2*

- Developed a comprehensive student database management system using Python Django framework with automated deployment pipeline
- Implemented CI/CD pipeline using Jenkins for automated testing, building, and deployment to AWS cloud infrastructure
- Containerized application using Docker and deployed on AWS EC2 using Docker Compose for multi-container application management
- Utilized Terraform for Infrastructure as Code (IaC) to provision MySQL database
- Integrated automated database migrations and backup strategies using AWS Lambda functions and CloudWatch scheduling
- Applied GitHub Actions practices with automated rollback mechanisms and environment-specific configuration management
- Achieved 99.9% uptime and reduced deployment time from 2 hours to 15 minutes through automation

**Intelligent Storage Monitoring & Alerting System** | *Python, Prometheus, Grafana, Ansible*

- Built automated storage monitoring system that triggers alerts when disk usage exceeds 90% threshold across multiple servers
- Developed Python scripts with Prometheus metrics collection for real-time storage utilization monitoring
- Configured Grafana dashboards with custom alerting rules and integrated for email/SMS notifications
- Implemented Ansible playbooks for automated storage cleanup and log rotation across production environments
- Reduced storage-related downtime by 85% and improved response time from hours to under 5 minutes

## INTERNSHIP

---

**Full-Stack Web Development Trainee**

Devtown – Remote

- Collaborated in a team project simulating real-world software development.
- Contributed as a Frontend Developer, building responsive web pages using HTML and CSS.
- Worked closely with peers to integrate frontend with backend components, ensuring smooth functionality
- Gained experience in team-based development, project collaboration, and documentation using Google Workspace
- Strengthened adaptability and enthusiasm for learning new technologies through hands-on practice.
