PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience in AI-powered applications, and cloud deployment. Strong foundation in Python, SQL, Machine Learning, and Retrieval-Augmented Generation (RAG) systems using LangChain and Hugging Face. Experienced in AWS, Docker, CI/CD pipelines, and deploying scalable applications with strong understanding of software engineering fundamentals.

EDUCATION

Bachelor of Technology in Computer Science Engineering

2025

Godavari Institute of Engineering & Technology

CGPA: 7.4/10

TECHNICAL SKILLS

Programming Languages: Python, SQL

Machine Learning & AI: Scikit-learn, TensorFlow (basic), Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), LangChain, Hugging Face

Natural Language Processing: Text Preprocessing, Tokenization, TF-IDF, CountVectorizer, Sentiment Analysis

Cloud & DevOps: AWS EC2, Docker, Jenkins, Terraform, CI/CD, Git, GitHub, Linux

Databases: MySQL

PROJECTS

Customer Churn Prediction using Machine Learning | *Python, SQL, Scikit-learn, Streamlit*

- Built a supervised machine learning model to predict customer churn using structured customer datasets.
- Performed preprocessing, feature engineering, and model evaluation using Python and Scikit-learn.
- Deployed the prediction system using Streamlit for batch predictions, analytics, and CSV report downloads.

Context-Aware RAG-based AI Chatbot | *Python, LangChain, Hugging Face, LLM APIs*

- Designed and implemented a Retrieval-Augmented Generation (RAG) chatbot to answer user queries using custom document knowledge bases.
- Integrated transformer-based LLMs from Hugging Face with LangChain retrieval pipelines for context-aware response generation.
- Implemented vector embeddings and semantic search to retrieve relevant context before passing data to the LLM.

Automated CI/CD Student CGPA Management System | *Python, Docker, Jenkins, AWS EC2, Terraform*

- Developed a Dockerized Flask-based Student CGPA Management application with SQLite integration.
- Automated CI/CD deployment pipelines using GitHub Actions and Ansible on AWS EC2.
- Provisioned cloud infrastructure using Terraform as Infrastructure as Code (IaC).
- Reduced manual deployment effort through automated container build and deployment workflows.

INTERNSHIP EXPERIENCE

Data Analyst Intern

Dec 2024 – Mar 2025

Vaultsphere AI Technologies

Remote

- Performed Exploratory Data Analysis (EDA) and preprocessing on large customer datasets using Python, and Pandas.
- Cleaned and validated datasets by handling missing values and inconsistencies to improve data quality.
- Built automated reports and dashboards reducing manual reporting efforts by 40%.
- Collaborated with teams to translate business requirements into analytical and data-driven solutions.
