PROFESSIONAL SUMMARY

AI/ML-focused Computer Science graduate seeking an **AI/ML Intern or Entry-Level role**. Strong foundation in Python, Machine Learning, and Natural Language Processing, with hands-on experience building data-driven models and modern AI systems using Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG). Experienced in working with real-world datasets, model training, evaluation, and deployment.

EDUCATION

Bachelor of Technology in Computer Science Engineering

2025

Godavari Institute of Engineering & Technology

CGPA: 7.4/10

TECHNICAL SKILLS

Programming Languages: Python, SQL

Machine Learning & AI: Supervised Learning, Classification, Feature Engineering, Model Evaluation, Scikit-learn, TensorFlow (basic), Large Language Models (LLMs), Retrieval-Augmented Generation (RAG)

Natural Language Processing: Text Preprocessing, Tokenization, TF-IDF, CountVectorizer, Sentiment Analysis

Data Analysis & Visualization: Pandas, NumPy, Excel, Power BI, Matplotlib, Seaborn

Databases: MySQL

Tools: Git, GitHub, Linux, Docker (basic)

PROJECTS

Customer Churn Prediction using Machine Learning | *Python, Pandas, Scikit-learn, Streamlit*

- Built a supervised machine learning model to predict customer churn using historical customer data.
- Performed data preprocessing including missing value handling, categorical feature encoding, and feature scaling.
- Trained and evaluated classification models to identify high-risk churn customers.
- Deployed the trained model using Streamlit to enable batch predictions, visual analytics, and CSV report downloads.

Twitter Sentiment Analysis using NLP and Machine Learning | *Python, NLP, Scikit-learn*

- Developed an NLP pipeline to analyze sentiment from Twitter text data using a real-world dataset.
- Applied text preprocessing techniques including tokenization, stopword removal, and text normalization.
- Converted unstructured text into numerical features using TF-IDF and CountVectorizer.
- Trained and evaluated machine learning classifiers to classify tweets into sentiment categories.

Context-Aware RAG-based AI Chatbot | *Python, LangChain, Hugging Face*

- Designed and implemented a Retrieval-Augmented Generation (RAG) chatbot to answer user queries based on custom document data.
- Utilized transformer-based Large Language Models (LLMs) from Hugging Face for response generation.
- Integrated vector embeddings and semantic search to retrieve relevant context prior to answer generation.
- Improved response accuracy and reduced hallucinations by grounding LLM outputs in retrieved documents.

INTERNSHIP EXPERIENCE

Data Analyst Intern

Dec 2024 – Mar 2025

Vaultsphere AI Technologies

Remote

- Performed Exploratory Data Analysis (EDA) on customer datasets with 10,000+ records to understand data distributions, trends, and key metrics.
- Cleaned and preprocessed datasets by handling missing values, correcting inconsistencies, and validating data quality prior to analysis.
- Analyzed customer behavior using descriptive statistics and visualizations to support data-driven insights.
- Developed automated reports and basic dashboards using Excel and visualization tools, reducing manual reporting effort by 40%.
- Collaborated with team members to gather requirements and translate business questions into analytical summaries.
